

Steps to invoke RESTApi CRUD Operations using PostMan

From the menu select **File->New..** . Then select **HTTP** as shown in below two screenshots. It will then open window from where you can invoke REST URL's.

POST: For adding a record

In Headers tab, Set Key, Value: Key: **Content-Type** Value: **application/json**.

In Body tab, set JSON value.

GET: To get all records

Refer below screenshot.

Ashutosh Pujari

GET: To get single record

Refer below screenshot.

PUT: Update a record

DELETE: Delete record

The screenshot displays the Postman API client interface. The top bar shows the workspace name "Ashutosh Pujari's Workspace" and a search bar. The main area is divided into several panels:

- Left Panel:** Contains "COLLECTIONS" (No items in this panel), "ENVIRONMENTS", "DOCUMENTS", "SPECS", "MOCKS", and "FLOWS".
- Top Bar:** Shows the URL "http://localhost:8080/api/employees/102" and a "DELETE" method. There are buttons for "Save" and "Share".
- Request Body:** The "Body" tab is selected, showing a JSON object:

```
{  "department": "IT",  "id": 102,  "name": "AAnnu",  "salary": 75000.0}
```
- Response:** The "Body" tab is selected, showing a "204 No Content" status. The response is empty.
- Right Panel:** Contains a "New Chat" button and a chat area with a prompt: "Describe what you need. Press @ for context, / for Skills." and an "Auto" button.

The bottom status bar shows "Local mode" and "Terminal Console".
